Lake Fact Sheet – Parry Sound District

Angel Lake

Fisheries Management

Fisheries Management Zone: 15

Designation for Lake Trout Management: ..... not designated

Fishing Regulation Exceptions ..... no lake-specific exceptions

Current Stocking: ..... none

Historic Stocking (last year stocked): ..... none

Contaminants (species tested): ..... no testing done

Assessment: Completed Projects:

1974 lake survey

Synopsis

The 1974 lake survey reported catches of white sucker, brown bullhead and pumpkinseed in the lake. Correspondence from local anglers reported catches of brook trout in the lake in the early 1970's. Since the lake has never been stocked this would indicate a natural brook trout population exists or did exist in the lake. A lake survey should be performed on the lake to update the fish community. Largemouth bass are known to be established in neighbouring lakes, such as Big Stephen, so it is possible they are in Angel Lake as well.
